Overview
The primary themes of this workshop center around heterogeneity (phenotypic, signaling, genotypic) and the microenvironment (ECM, nutrients, fibroblasts, immune cells). Since a highly heterogeneous tumor has the potential to adapt to any microenvironment, understanding how interactions between the growing tumor and its microenvironment modulate tumor heterogeneity is critical to unraveling the mechanisms of cancer initiation.

Organizers
Alexander Anderson, Moffitt Cancer Center
Michael Ostrowski, Ohio State

Trevor Graham, Barts Cancer Inst., QMUL
Charlie Swanton, London Research Institute

Speakers
Robert Clarke, Georgetown
Mary Helen Barcellos-Hoff, New York
Joseph Costello, UCSF
Elza De Bruin, UCL Cancer Institute
Robert Gatenby, Moffitt Cancer Center
Trevor Graham, Barts Cancer Inst., QMUL
Sui Huang, Northwestern
Simon Leedham, Oxford
Parag Mallick, Stanford
Vito Quaranta, Vanderbilt
Erik Sahai, London Research Institute
Ricard Sole, Pompeu Fabra
Zoltan Szallasi, Harvard
Daniel Worthley, Adelaide
Fran Balkwill, QMUL

Robert Gatenby, Moffitt Cancer Center
Jude Fitzgibbon, QMUL
Philip Gerlee, Chalmers
Simon Hayward, Vanderbilt
Shelley Hwang, Duke
Gustavo Leone, Ohio State
Morag Park, McGill
Sergio Quezada, UCL Cancer Institute
Owen Sansom, Beatson Institute
Andrea Sottoriva, Institute of Cancer Research
Thea Tlsty, UCSF
Richard White, Sloan Kettering Cancer Center
Yinyin Yuan, Institute of Cancer Research

MBI receives major funding from the National Sciences Foundation Division of Mathematical Sciences and is supported by The Ohio State University. MBI adheres to the AA/EOE guidelines.
